EDUCATION

University of Massachusetts Amherst

Amherst, MA

Bachelor of Science in Computer Science

Jan. 2023 - May 2026

Relevant Coursework: Algorithms, Web Programming, Computer Architecture, Software Engineering, Data Systems

EXPERIENCE

Founding Engineer

Austin, TX

Synaptix

May 2025 - Present

- o Built and led development of a healthcare-focused medical translation and clinical documentation platform, delivering a full working demo presented to physicians and legal professionals.
- o Designed and implemented a full-stack web application that combines real-time medical translation with automated clinical note generation, charting, and discharge summaries.
- o Developed backend services and APIs to support secure data flow and model inference, while collaborating with clinicians to refine workflows for real-world clinical use and future EHR integration.
- o Contributed to early-stage fundraising efforts, helping raise **\$75K+** in funding, and worked as a contracted engineer on the startup's core product.

Research Intern

San Marcos, TX

Texas State University

May 2025 - Aug. 2025

- o First author of an accepted conference paper on a simulated smart-home system for autism support, leading system design, experimentation, and technical writing in a five-member research team.
- o Designed a Unity-based simulation environment and backend services to ingest, process, and classify real-time sensor data, integrating a FastAPI service with MQTT messaging for low-latency communication.
- o Built an end-to-end data pipeline producing **450k+ labeled samples** and achieving **83.6% multi-class accuracy** with sub-second end-to-end latency, demonstrating scalable and privacy-preserving behavior detection.

Research Intern

Houston, TX

University of Houston

May 2024 - Aug. 2024

- o Led development of a backend-driven analysis pipeline for detecting vulnerable code using large language models, focusing on reliable classification and evaluation over raw text generation.
- o Evaluated and integrated multiple open-source models (Gemma, LLaMA, RoBERTa, Phi), designing experiments to compare performance and selecting RoBERTa for production-ready binary classification.
- o Fine-tuned a RoBERTa-based classifier achieving **96% accuracy** and a **0.91 F1 score**, significantly outperforming prompt-based baselines and improving robustness on unseen code samples.

PROJECTS

CodeVis — Code Visualization Platform

Jan. 2025 - Present

Personal Project

- o Built a full-stack platform generating Manim animations of algorithms from natural language prompts via OpenAI API, deployed in a custom Dockerized environment on Railway.
- o Architected an async job queue on a Node.js/Express backend handling long-running Python rendering processes, with a React/TypeScript frontend and Supabase for persistent animation storage.

TECHNICAL SKILLS

Languages:

Python, JavaScript, C++, C#, Java, SQL

Frameworks & Libraries:

React, Node.js, Express.js, Flask, Pandas, NumPy, TensorFlow, PyTorch

Databases:

MySQL, MongoDB, SQLite

Developer Tools:

Git, Docker, AWS (S3), Postman, Jupyter, VS Code, Neovim, Netlify
